Analysis of 331 Pesticides and Their Metabolites in Grapes

Chenyuan Zhang¹, Derrick Tan²¹ Shimadzu (Shanghai) Global Laboratory Consumables Co., Ltd. (referred to as SGLC)² Shimadzu Asia Pacific Pte Ltd

User Benefits

- ◆ Established an effective, fast and simple sample preparation method for analysis of pesticides in grapes.
- ◆ Realized simultaneous quantitative analysis of multi pesticides and metabolites, such as organophosphates, organochlorines, pyrethroids, triazole, amides, triazines and carbamate esters.
- ◆ SHIMSEN QuEChERS provides precise amounts salts in sachet packs and SPE sorbents in centrifuge tube for enhanced laboratory efficiency and throughput.

■ Introduction

Pesticides are essential tools in agriculture for protecting crops from pests and diseases, but their presence in food products must be carefully monitored to ensure consumer safety. Grapes, a widely consumed fruit, are no exception. Pesticide residues in grapes can pose potential health risks and impact the quality of the final products. Therefore, rigorous analysis methods are crucial to determine the levels of pesticide residues in grapes and ensure compliance with regulatory standards. In this application, we present a complete workflow according to GB23200.121-2021, from sample preparation using SHIMSEN QuEChERS, to sample analysis using Shim-pack GIST C-18-AQ column on Shimadzu LCMS-8060NX.

Table 1. LCMS conditions

UHPLC condition:

LC system:	Shimadzu Nexera™ LC-40B X3
Column:	Shim-pack GIST C18-AQ, 1.9 µm, 100 × 2.1 mm *1
Column Temp.:	40 °C
Flow rate:	0.3 mL/min
Mobile phase A:	2 mM ammonium formate in water containing 0.1% formic acid
Mobile phase B:	2 mM ammonium formate in methanol containing 0.1% formic acid
Gradient program:	3% B (0 min) → 3% B (1 min) → 15% B (1.5 min) → 50% B (2.5 min) → 70% B (18 min) → 98% B (23 min) → 98% B (27 min) → 3% B (27.1 min) → 3% B (30 min)
Injection volume:	2 µL (co-injection, 20 µL water)

MS conditions:

Interface:	Heated ESI (Positive or Negative)
Interface temp:	300 °C
Collision gas:	Ar
Nebulizing gas:	N ₂ , 3 L/min
Heating gas flow:	Zero air, 10 L/min
DL temperature:	150 °C
Drying gas flow:	N ₂ , 10 L/min
Heat block temp:	400 °C
MS mode:	MRM

■ Experimental

Materials:

SHIMSEN QuEChERS Extract Salt (P/N: 380-00149)
SHIMSEN QuEChERS dSPE tube (P/N: 380-00196-01)
Filter and vial:
SHIMSEN Disc HPTFE syringe filter (P/N: 380-00341);
LabTotal Vial (P/N: 227-34001-01)

Sample Preparation:

10 g of homogenized sample in 50 mL centrifuge tube was added with 10 mL of acetonitrile followed by SHIMSEN QuEChERS extraction salt (4 g MgSO₄, 1 g NaCl, 0.5 g DHS, 1 g TSCD, P/N: 380-00149) and a single piece of ceramic homogenizer (P/N: 380-00171). The tube was shake vigorously for 1 min after which centrifuged for 5 minutes at 4200 rpm. 6 mL of the supernatant was transferred into SHIMSEN QuEChERS dSPE tube (30 mg PSA, 15 mg GCB, 900 mg MgSO₄, P/N: 380-00196-01), vortex and mix for 1 min, centrifuged at 4200 rpm for 5 min, and filtered 2 mL of the supernatant through a 0.22 µm syringe filter for LC-MS/MS analysis. Figure shows the simplified sample preparation workflow.

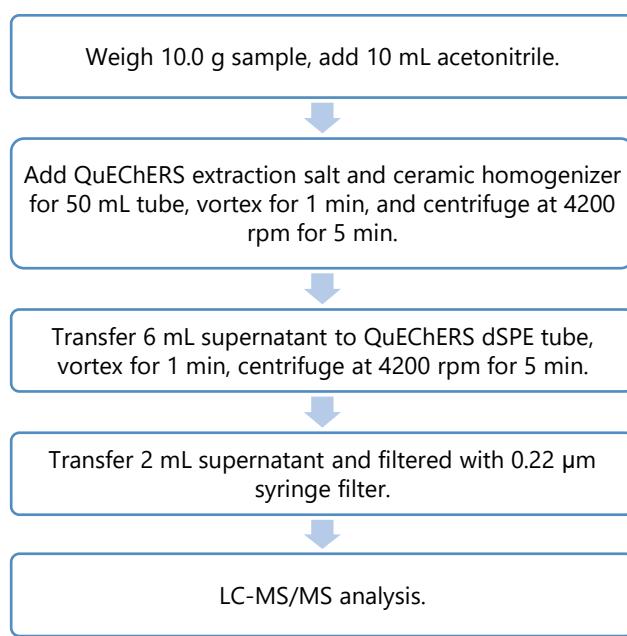

Figure 1. QuEChERS sample preparation workflow for grape.

Table 2. List of MRM used for each pesticides.

^a Pesticide contains two chromatographic peaks, which are either its cis-trans isomers or non-enantiomeric isomers. The sum of the peak areas need to be used for quantification.

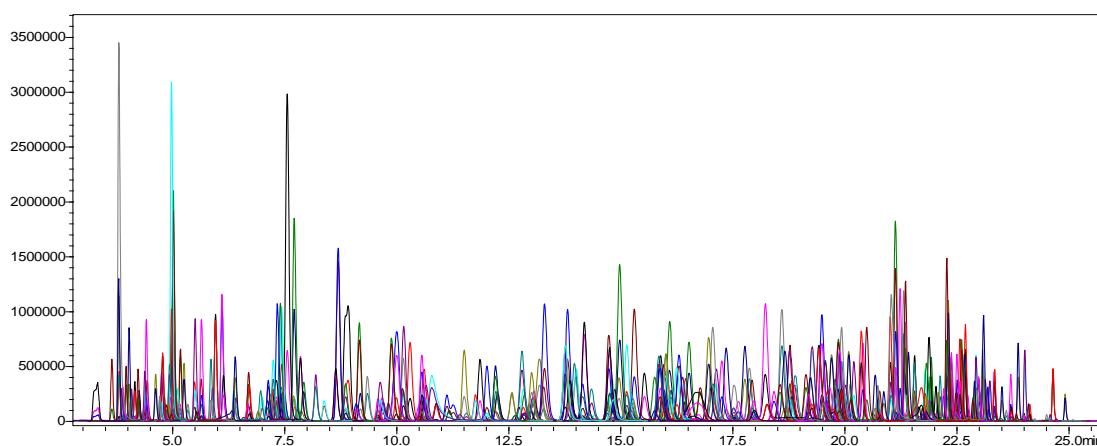

Figure 2. MRM chromatogram of 331 pesticides and their metabolites standards in grape matrix (concentration: 10 ng/mL).

Table 3. List of recovery and %RSD for each pesticides.

■ Results and Discussion

Grape blank matrix was spiked with a standard solution of pesticides to a final concentration of 0.01 mg/kg. QuEChERS method sample preparation was performed according to Figure 1. Figure 2 shows the MRM chromatogram of the pesticide standards in grape matrix. Three independent experiment was performed to determine average recovery and %RSD. Results shows majority of the compounds having a good recovery rate between 80%-120%, except thiabendazole (138.08%) and etofenprox (125.34%). %RSD of all compound were below 20% except EPN (27.06%). Recovery and %RSD for all the compounds are shown in Table 3.

■ Conclusion

This study presents a method for the determination of 331 pesticides and their metabolite residues in grapes according to GB 23200.121-2021 method. Shimadzu SHIMSEN QuEChERS products were used for extraction and clean-up, followed analysis using Shim-pack GIST C18-AQ column on Shimadzu LCMS-8060NX. The recovery and reproducibility was determined using 0.01 mg/kg spiked grape blank sample. The results shows a high recovery rate of 82.23%-138.08%, and a good reproducibility, with %RSD of 0.32%-27.06%.
